

Android enterprise

Work-Managed enrolment
Zero-touch provisioning

MobileIron Core

Android 8.x

October 2017

Enterprise Mobility documentation by bayton

Requirements

In order to proceed, you must have:

- Android 8.0 or later installed on supported devices purchased from an authorised reseller.
- A functional MobileIron EMM solution in place.
- Android enterprise fully configured on your EMM platform.
- An EMM and configurations assigned to devices in your zero-touch console.

Zero-touch is currently limited to a small selection of devices and resellers. For devices running an Android version below 8.0 consider DPC identifier, QR or NFC provisioning.

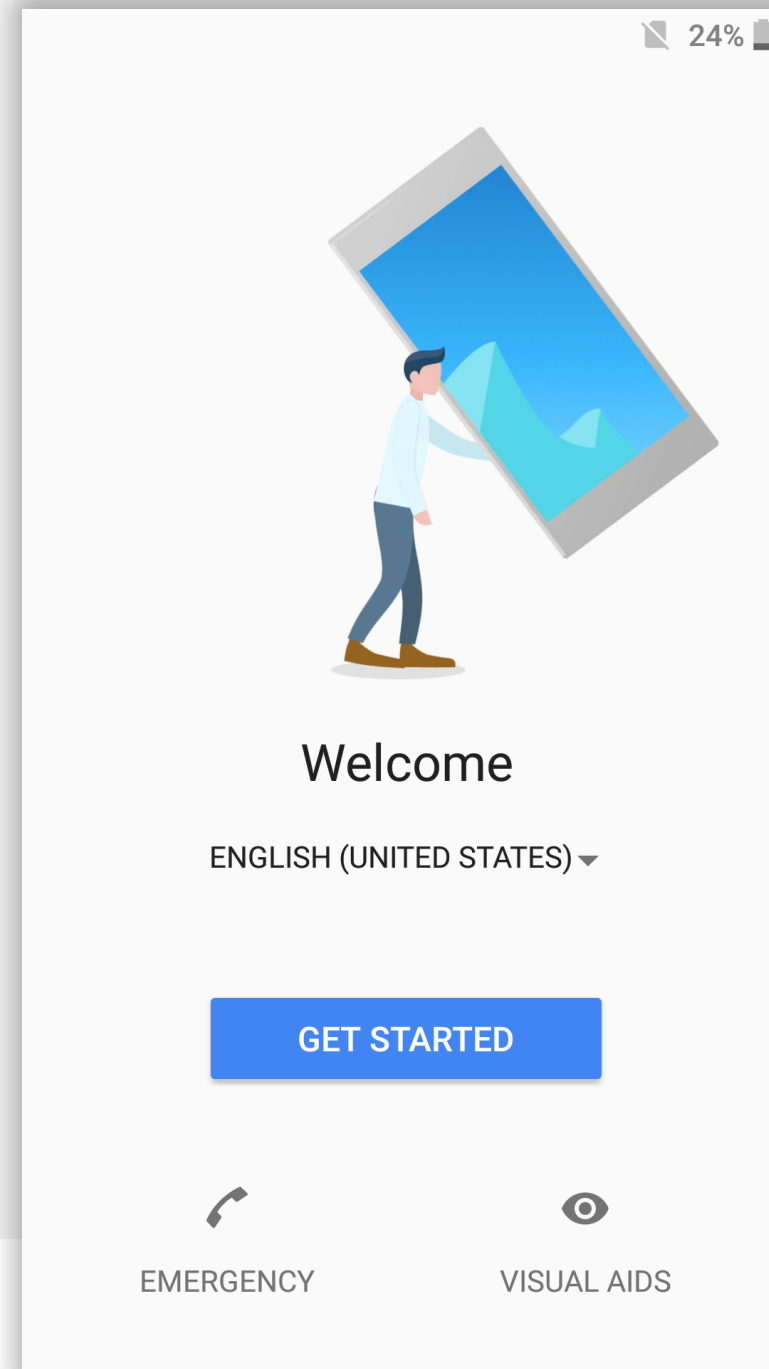

Note: Some initial steps in this guide are Sony-specific. These will be highlighted with an asterisk (*).

Begin device setup

For zero-touch provisioning there are no special initial steps.
To begin, optionally change the language to reflect your locale
and tap **GET STARTED**.

Continue device setup *

Tap **Accept** in order to continue, you may wish to opt out of Sony's Xperia diagnostics programme.

Continue device setup *

The Xperia offers two connectivity options for setting up the device.

If you don't have a data plan, tap **Wi-Fi only** and this will not seek to use mobile data during setup.

Otherwise, it's recommended to tap **Mobile network and Wi-Fi** to allow the device to use either available option (WiFi will be set up in the following steps in either case).

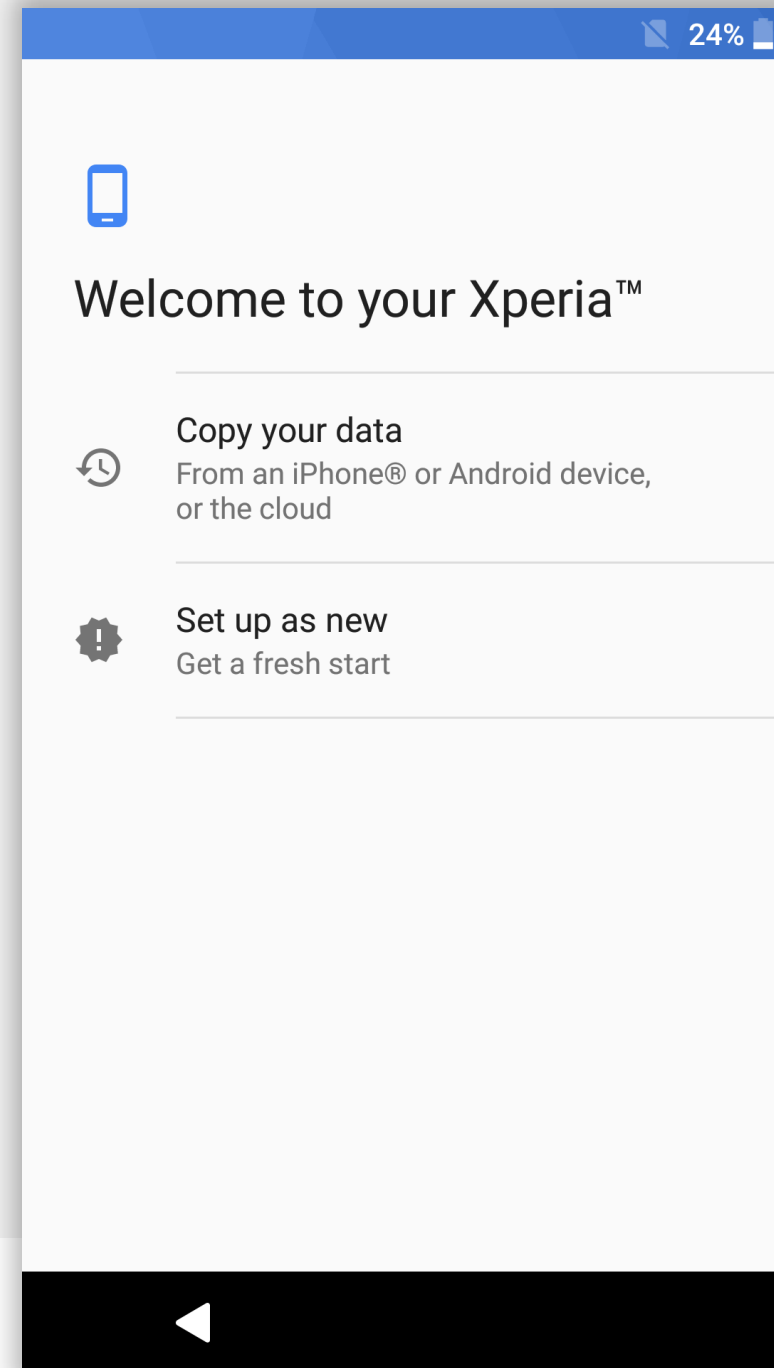

Continue device setup

Tap **Set up as new**.

Selecting **Copy your data** does not initiate the accounts copy with zero-touch even if it is accidentally (or purposefully) tapped.

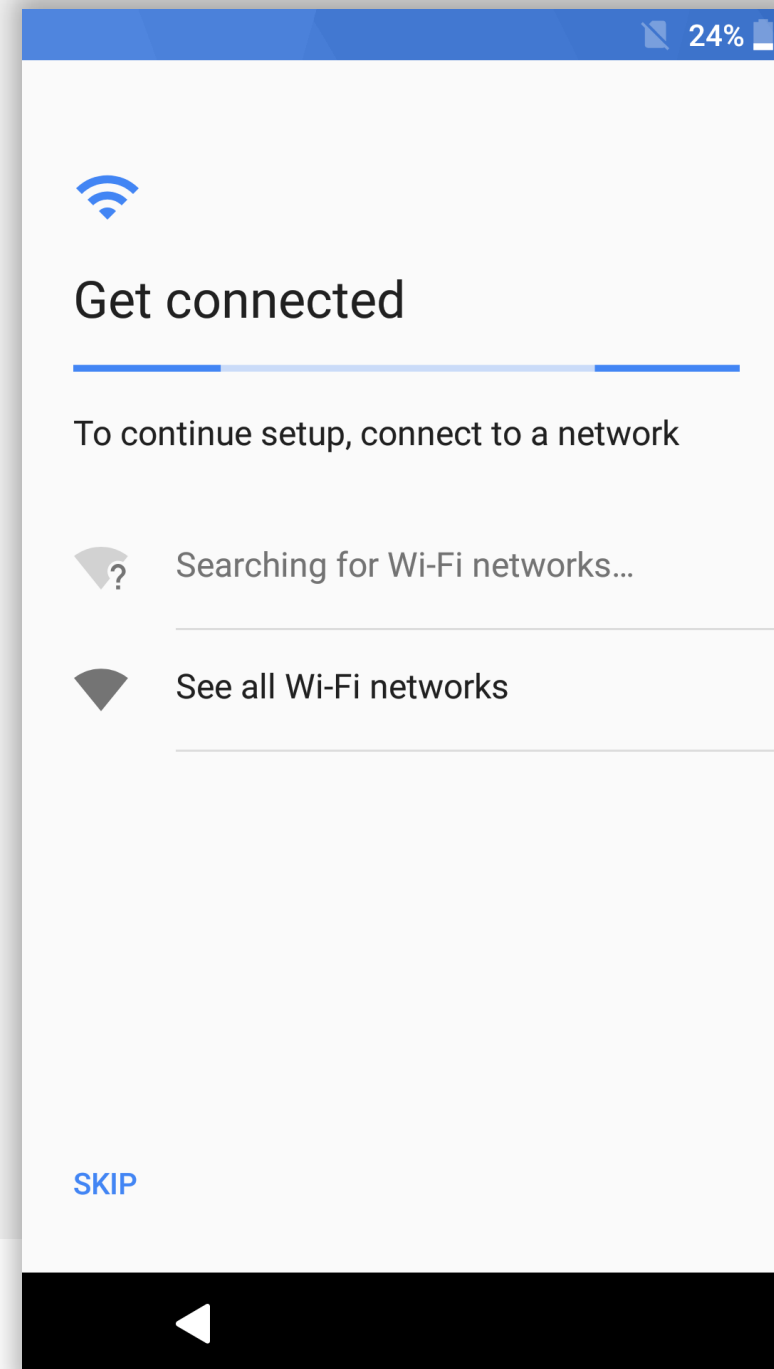

Continue device setup

The device requires connectivity in order to download the DPC and, later, policies & configs.

Connect to a WiFi network. The device will automatically progress once a connection has been made.

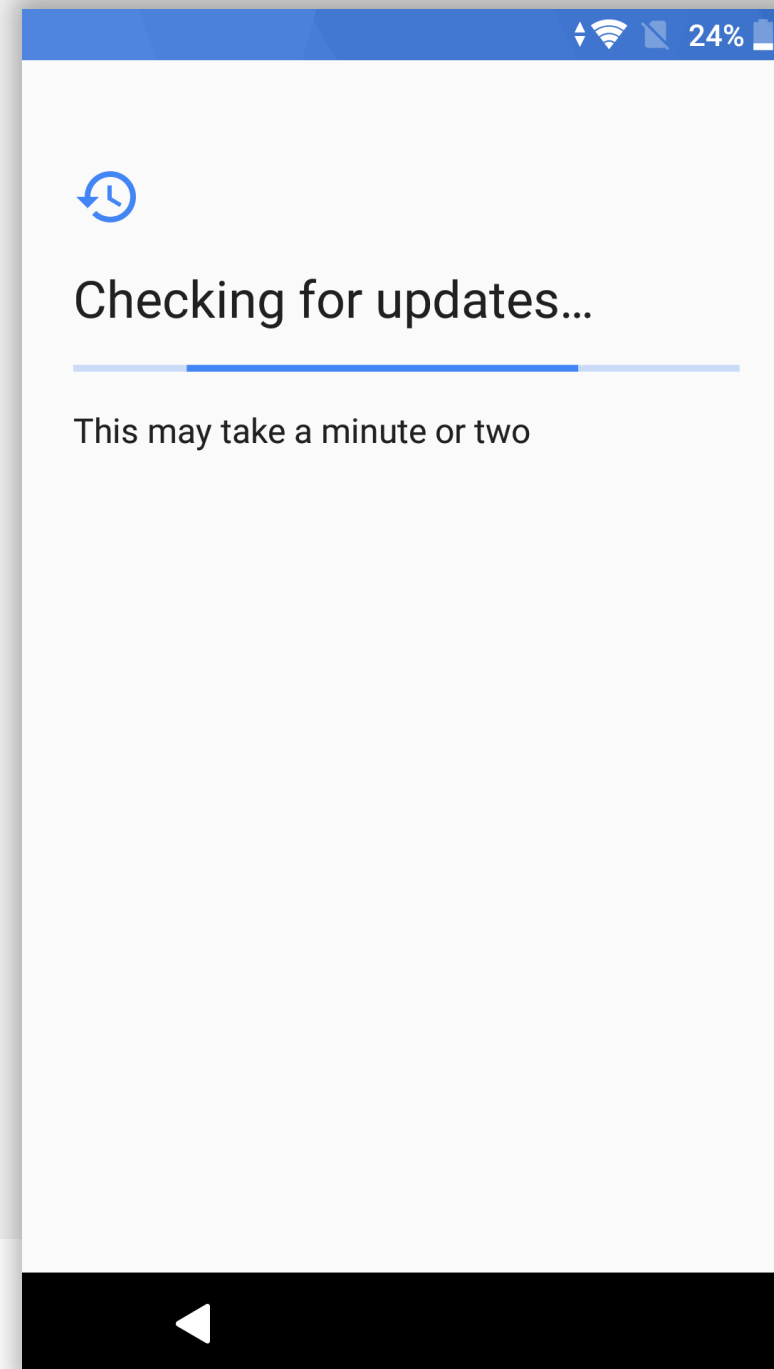

Alternatively, for devices with an active data connection, WiFi can be skipped by selecting **Use mobile network for setup** (not pictured).

Continue device setup

Once connected, the device will check for updates and automatically continue when complete.

Provisioning in progress

The device will now prompt you with a notice stating the device will be managed by the organisation.

Tap **ACCEPT & CONTINUE**.

Set up your device

This device will be managed and kept secure by Bayton. Terms from Google apply. [View terms](#)

If you have questions, contact your [organization's admin](#).

Bayton will manage this device using the following app:

Mobile@Work

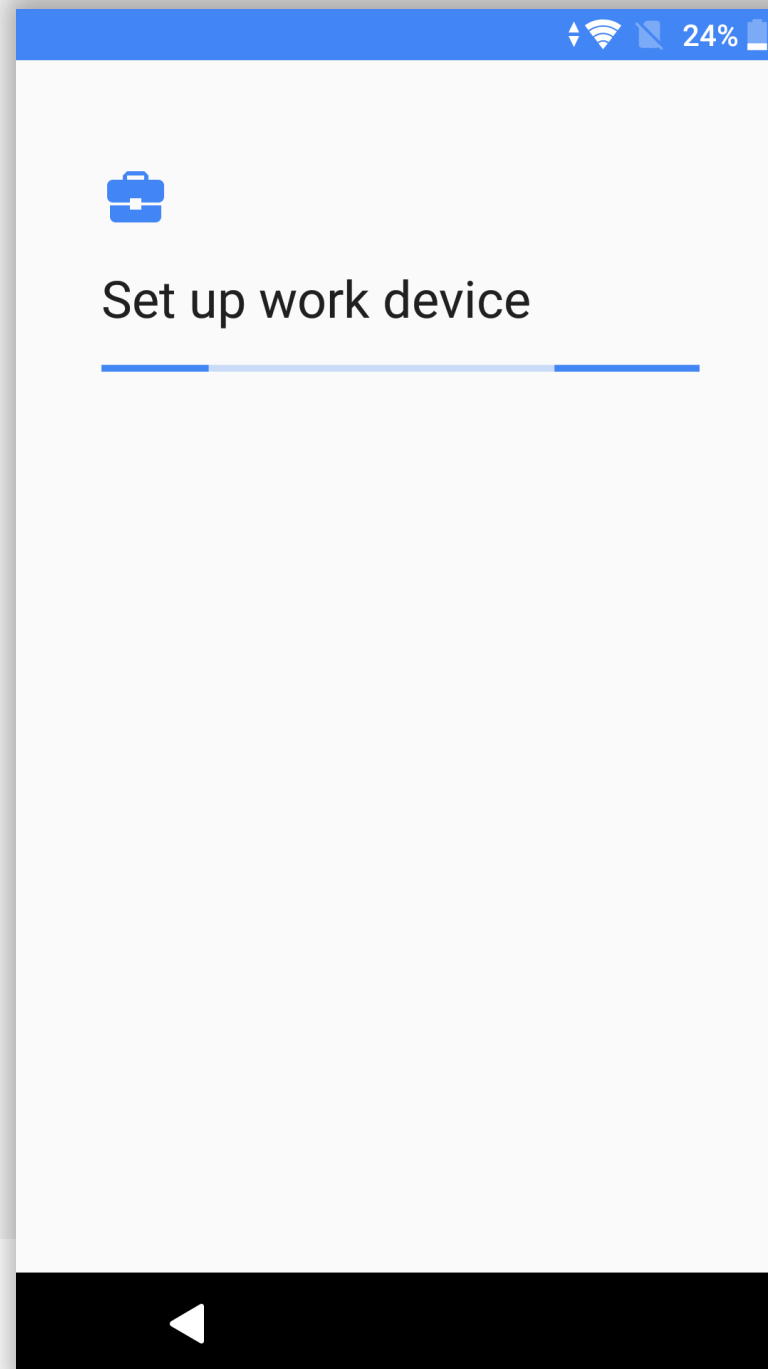

ACCEPT & CONTINUE

Provisioning in progress

The device will now download the DPC and automatically move to the next step in the process.

Provisioning complete

Zero-touch provisioning is now complete and the DPC will automatically launch shortly after reaching the home screen.

At this point MobileIron enrolment will initiate, and after authentication any relevant applications, policies or configurations will be automatically downloaded to the device.
